Notes

- Overall: keep layout of version B, but add some design elements from version A
- Like color palette of version A (red accents)
- Like image at the top of version B
- Prefer to have title in the center + darker color, then have quote underneath
- Like carousel of characters on version B
 - Add name of character underneath, or show name when you hover over the image
- Like the links to other pages on home page of version B
- Decrease border radius of the rounded corner of the cards
- Like playing cards on version A—maybe use for characters carousel?
- Can make individual pages for characters, then have link/button to go back to all characters page
- Like blue background of version A
- Find a less condensed sans serif typeface for body text
- Find a vintage-looking display/title font one that's not all caps (title case)
- Add title of website to top of nav bar as a link back to home page
- Prefer without horizontal dividers
 - Maybe experiment with incorporating border in a different way?
